

# Executive Summary of this approach

December 2023

I'm looking for a \$45 million loan to organise the official launch of the H3 organisation. The launch will take the form of a global marketing campaign in old and new media across fourteen countries in seven languages. It will push forward the two largest initiatives ever proposed; one of which is a complete and actual **solution for Climate Change** that fossil fuels companies and politicians (Left and Right) will want to do even more than greenies; so in other words, it is something that WILL be done. The other is the CNGE Initiative overviewed second here. The prep work for the launch will take six weeks from the moment it is funded, and the launch will take place on a weekend starting Friday night 8pm AEST.

## Climate Change

A complete solution in five major elements: The forestry, fishing and fossil fuels industries will all be even more keen to do this than greenies. It makes all of them more than two times richer than they are today, and it does this in the first year of implementation, almost literally before we even lift a finger to fix Climate Change (greenies will want to do it too).

**ANSR** will get the fossil fuels industry 100% and genuinely behind eliminating fossil fuels.

**FISCIL** is a complete solution to overfishing that will increase carbon absorption by the oceans back to more than what it was centuries ago, and all through natural means.

**Oasis** is a complete fix for deforestation and new financial model for the Forest Industries.

**Kyoto II** is the working title of the global agreement designed to get the countries of the world all moving in the same direction, with language that governments actually want to do.

**New technology:** There are provisions in Kyoto II that will get us the technology we need, and then there are the comments in the proof section below.

The primary point is that the economic reasons why we never try to fix it are now turned on their head. From it costing trillions of dollars to us making trillions as we fix it. We will do this.

## The CNGE Initiative

A proposal for a new central bank for the world, to be presented as ready for implementation as soon as the major economies of the world decide to pull the trigger. About \$15 million is required for the **CNGE** prep work, most of it in legal expenses to write the required documents.

**Central Bank for the world:** Over \$40 trillion in distributions to the countries of the world to negate all the economic impacts from COVID now, and for use in future crises as well.

**New international territory** in Australia to house it: NO sovereign transfer of land.

**Construction of an unofficial world capital** inside the territory: A new global economic centre to be built in south-eastern Australia over about thirty years, part of which will be a significant and ongoing push to relocate UNHQ into more neutral territory.

## The proof being offered

Firstly, you have the approach to Climate Change in the CC discussion paper and the dedicated discussion papers for FISCIL, Oasis and Kyoto II. The FISCIL entry in the **CC discussion paper** is very straightforward (2+2), and is the proof of concept for this new type of solution; solutions that make money as we're solving our biggest problems; and money at the beginning before we even lift a finger to solve. The other proof is as mentioned in the **Proof of H3** document:

1. The secrets behind eight new technologies in the second half of the Eden book in the "Something to Think About" section.
2. Mostly open discussion about "a dozen" other new technologies inside the ttk book.
3. The Nine Muses book will, intellectually speaking, be viewed as a significant document. Because I wrote it, I can hardly say it is proof of a massive intellect now can I????

4. The Save Steps book is a hundred bits of the H3 Agenda broken down into bite-sized pieces.
5. The **Water Tower** is a new type of zero emissions energy generation technology that is laid bare for all to see, and although I am providing the details and it will work, we're not going to build one, and I tell you why in the last section of that document.

### **H3 Literature**

The primary purposes of the **six books of the H3 literature** are to provide an overview of the H3 operation and to provide proof of a significant intellect. Because I am a nobody coming from nowhere, I need to show it up front. There are book description pages on the website, so to put it as succinctly as possible: the Save Steps book is an introduction to the H3 Agenda; The Prince Principle tells you how such a thing is possible (solutions to our biggest problems that the rich and powerful will be keen to do and will actually solve); Eden is an overview of the organisation that has been designed to make it all happen; Nine Muses is a group of passages I like to write when I'm "lazing on a Sunday afternoon"; the ttk book is the result of a hobby I've had whilst I've been putting together the details of the H3 Agenda and organisation; and the trump book is my take on American politics that will not be viewed well by the Republican freakshow currently ascending.

### **My background; lack thereof**

I've spent the last twenty-three years in a cave working all of this out, and I've learned what I've needed to know along the way. Prior to me working on this, I mostly only worked for large organisations in low level office jobs, and I have no formal higher education. I am a true nobody, coming from nowhere; the main reason why I need to show so much proof up front.

### **Additional documents/info available to you**

You're essentially getting the "full" details for how we're about to fix Climate Change, actually FIX IT, and you have reasonable proof of technical competence with revelation of new technologies in the Eden and ttk books. There are other documents you can view if you wish:

1. Expenses summary for the \$45 million (full list and four pages of notes).
2. Two full page notices to go in about twenty newspapers across fourteen countries.
3. H3 Operations Manual (it covers what they usually do, 45,000 words, but very different).
4. You can buy the six books on Amazon.

I thought of a joke a few years ago, and if I don't use it now and over the next few months, then there will be no occasion for me to ever use it. It goes something like this: "I know I'm only offering about a trillion dollars' worth of proof and I know that's not very much; perhaps if you tell me how much proof you require, I'll see if I can get it to you". It's a joke, but it also happens to be right on the money.

### **Final comment**

The H3 launch is going to create the biggest splash of the year, and the content of the ttk and trump books are going to make additional splashes over and above the FIX for Climate Change and the "ready to go" proposal for a new central bank for the world. I'm asking for \$45 million to do the launch, and H3 is going to get massively overfunded on the initial profile splash alone; if not for anything else then certainly for the fix to Climate Change. Look into this; I have everything I say I have.
