

December 2023

Proposal to Exxon Mobil Corporation To deliver over \$500 billion in additional capital value to Exxon within the next two years.

The Proposal

This proposal is independent of any action your company may take, and whether the coal, oil and gas prices are 20% or 300% of what they are today has no bearing on this proposal either.

1. **You fund the launch of a new organisation called H3 with a \$45 million loan.**
2. The first two actions of this organisation are to implement a plan to stabilise the global economy via something called the **CNGE Initiative**, and to implement a completely **different approach to Climate Change**; this second one is where the money for **Exxon** comes from.
3. This approach to Climate Change contains five major initiatives, and the ANSR reform is specifically designed to get you and other fossil fuels companies onboard.
4. The details are contained in the **Climate Change discussion paper**, but the shorthand of how the ANSR reform impacts fossil fuels companies, is that it delivers replacement commerce for the fossil fuels income you'll be giving up as we wean ourselves off fossil fuels at an accelerated rate. The money to do this does NOT come from governments or from any other current source.
5. Because of the dynamics of this situation, it will be viewed as and is reasonable to provide replacement commerce worth twice the peak market value of your company over the last five years.
6. Because of the need to slightly overestimate when apportioning the replacement commerce, what this means for your company is replacement commerce worth over **\$1 trillion**, with significant growth opportunities on top of that.
7. At this point there are over twenty major commerce options to choose from worth well in excess of \$15 trillion; so in other words, there's more than enough.
8. **Repayment of the \$45 million loan plus interest occurs within six months due to H3 funding going through the roof as we move through the process.**

NB. The CNGE Initiative will enhance the global desire to undertake this approach to Climate Change, and this approach to Climate Change will greatly enhance the desire to do the CNGE Initiative. This is not an accident. We WILL do both.

The context

There are a number of **books** I've written to accompany this launch, and there is significant **proof of substance** I've also made available. The H3 organisation has been under development for just over twenty years, and it contains a suite of global economic reforms that are designed to solve many of our biggest problems, but it does it in such a way so that those with all the money and power in this world, the dyed in the wool capitalists, will be even more keen to implement them than greenies and humanists (it's the only way solutions to major problems will ever be adopted, don't you agree).

The process

1. We push forward something called the **CNGE Initiative**. It is a plan to stabilise the global economy by creating a new central bank for the world to replace the \$40 trillion lost or expended during COVID. The way we push it out is with a big shock announcement all over the world (in old and new media) and everything ready to implement in that moment, which will have the impact of putting governments, corporations, and the general public in the mindset of “waiting for Christmas morning”. It will have this effect because most major economies are “biting their nails” over the widely expected major downturn in the global economy, which this would avert, and because this is something we can do that fits inside the rules.
2. On the same day we do the ‘big shock announcement’ for the CNGE Initiative, we also push forward with the **H3 approach to Climate Change**, again in old and new media, and just like for the CNGE, this will include full page notices in well over a dozen major newspapers around the world. This, from the same organisation, will add to the ‘shock value’.
3. This will obviously create a huge profile splash for the H3 organisation: substance of the approach to **Climate Change**, new central bank for the world, and **the books**. These are the two largest public proposals ever made, with books demonstrating it’s just the start; and two of the books will make a very loud noise in addition to what this is all about. This launch IS going to be the biggest noise of the year.
4. As we’re going through the process for the CNGE Initiative the H3 organisation will be funded through the roof courtesy of all this, and because of the huge amount of “blue sky” contained inside the books.
5. After we implement the CNGE Initiative, we immediately move to fix Climate Change at the same time as we start to ramp up H3 operations.
6. As soon as H3 funding goes past \$400 million, I pay you back the loan and whatever interest you deem reasonable. This could take two months or it could take six months; it won’t take longer than that.
7. If things go roughly according to plan over the next two years then the value of **Exxon** will be hovering around the **\$1 trillion** mark long before this point.

Important note: The H3 approach to Climate Change and something like the CNGE Initiative are both going to be done no matter how they are announced to the world, BUT, if we want the CNGE Initiative to be done pretty much immediately then this is how we need to do it. Without the surprise launch and everything ready to go in that moment, then we will still do something like the CNGE, but we could very well talk about it at the UN for two or three or even five years before we do, and it’s something that needs to happen now. The sooner we do the CNGE Initiative, the sooner we get to the ANSR reform for fossil fuels. The CNGE Initiative was adapted from the ANSR reform.
