

H3 preliminary funding

2024

Preliminary funding

The preliminary funding requirement for H3 is \$500 million (this is the minimum required to kick it off properly). The defined benefit is three times what you put in, returned in two years, and it will be organised as a simple loan. I will be accepting up to \$1 billion if it is offered in this round.

What is H3

The initial headline is of course the [H3 approach to Climate Change](#); the magic bullet we've all been waiting for that will fix it; and it will fix overfishing and deforestation as well (any real solution to Climate Change was always going to require us to fix overfishing and deforestation as well). The [CNGE Initiative](#) will be another headline after the White Paper is released during the H3 launch weekend.

The ultra-brief summary for the rest of the H3 operation is that the H3 Agenda is specifically designed to fix many of the world's biggest problems, and double the size of the global economy as it goes about it. The [Eden is Burning Book](#) is an overview of the H3 organisation: commercial operations, new technologies, NGOs, global reforms, an overview of the H3 Agenda (over fifty major elements), and then there are the six books recently published to accompany the launch of H3.

What you're about to be introduced to is a lot, but twenty years is a long time to be working on something, and at no point do I ever ask you to simply trust me. The document linked [here](#) is the place to start.

“Conditions”

I'm loathed to come off as a Linda Evangelista caricature, but I really am looking for the richest people in the world to step up here (seeing as they are the ones who will benefit most from the H3 Agenda), and if this is funded in one or two or three hits, then that is obviously the preferred avenue. Perhaps the oil companies could step up and fund the whole thing seeing as they will be getting trillions of dollars directly into their coffers as part of the approach to Climate Change. This is not open for small investors.

There will be several commercial operations emerge from out of H3 in the first two years, and it will be possible for lenders to exchange their debt for equity in those corporations, BUT, there is no equity on offer in the main operational entity of H3, and that is a dealbreaker. Do not believe we can enter negotiations and that this statement will somehow become negotiable; you will be wasting my time and yours. If you come into this, then you'll be contributing towards actually fixing Climate Change, you'll be helping to stabilise the world with the new central bank (avoiding the imminent global recession), and you'll be getting a threefold return; surely that's good enough for anybody. If you are one of the seed funders of the H3 organisation you'll be able to dine out on it for the rest of your lives; I have what I say I have in the books. Check it out: the [books](#) and the [discussion papers](#) on the web.

NB. This approach to Climate Change will obviously fix it, and because the solving is intertwined with the making of money for the superrich, then we ARE going to do it; and now that a central bank for the world has been proposed, it is irresistible and will be done; either this version or some future version. And if we do this version, the CNGE Initiative, then we get to accelerate the approach to Climate Change, which means the \$10 trillion+ we add into the global economy in the first year of implementing this approach to Climate Change materialises faster.
