

Proof of H3

This is just a one page list of all the proof being offered to confirm the substance behind the H3 operation. It's all linked.

1. **The FISCIL reform of the Global Fishing Industry** unambiguously adds between \$200 billion and \$300 billion to the global economy as it solves overfishing completely. It's also part of the approach to Climate Change.
2. **The Oasis reform of the Global Forest Industries** adds \$200 billion into the global economy as it solves deforestation completely. This is part of the approach to Climate Change also.
3. **The ANSR reform** does most of the heavy lifting in the H3 approach to Climate Change, but it's not helpful to throw around the big numbers mentioned in the ANSR reform until you've actually read the Climate Change discussion paper. ANSR and FISCIL are the foundation of the H3 approach to Climate Change.
4. **The Water Tower technology** is zero emissions energy generation technology and the details are all out in the open for any to view without patent protection. It's not that I'm giving it away, but there is a reason for it and it's explained in the last section of the Water Tower document.
5. **The Kyoto II reform** is a new global agreement to replace our current Climate Change agreement. It is designed to get the world moving in the same direction on Climate Change.
6. The **Eden is Burning** book is an introduction to the organisation that will make the H3 agenda happen, and inside a section called *Something to Think About* there are a half a dozen new technologies unveiled.
7. The **Save Steps** book is chock-full of substance, but as it is most of the H3 agenda broken down into one hundred bite-sized pieces, it's a bit of a long read to get to all the proof inside; unless of course you're looking to do one or more of the many deep dives available to you at this point.
8. The **other books** in the H3 literature contain mountains of substance also but we're straying far afield of Climate Change if we go there.

Because we're not talking about how big ANSR is in this document, if we take into account only elements one, two and four, I'm providing well over \$1 trillion worth of proof here. The dollar amounts mentioned in points one and two come in as the first order of business as they are being implemented; they add a lot more into the economy heading into the future but that's their starting dollar value. In value, this is easily fifty times more proof than anybody has ever provided openly in advance of doing a thing. The bonus is that everything in here are things that those in power are going to be really keen to do, the majority of it they will be desperately keen to do, especially ANSR, so it's not as if we won't be doing this stuff, and ANSR is huge.
